

# AI-READY COMMUNITIES

A guided 12-week  
program to maximise  
the value of AI in your  
community

Presented By **Richard MILLINGTON**

## AI READY COMMUNITIES

'AI Ready' Communities is a three-month, cohort-based working program for community and customer leaders to optimise the incredible collective knowledge in their community for an AI-driven world.

This is not a course, and it's not a webinar series.

It's a guided, hands-on programme where a small group of organisations work through the same structural challenges together - supported by FeverBee's frameworks, facilitation, and direct input.

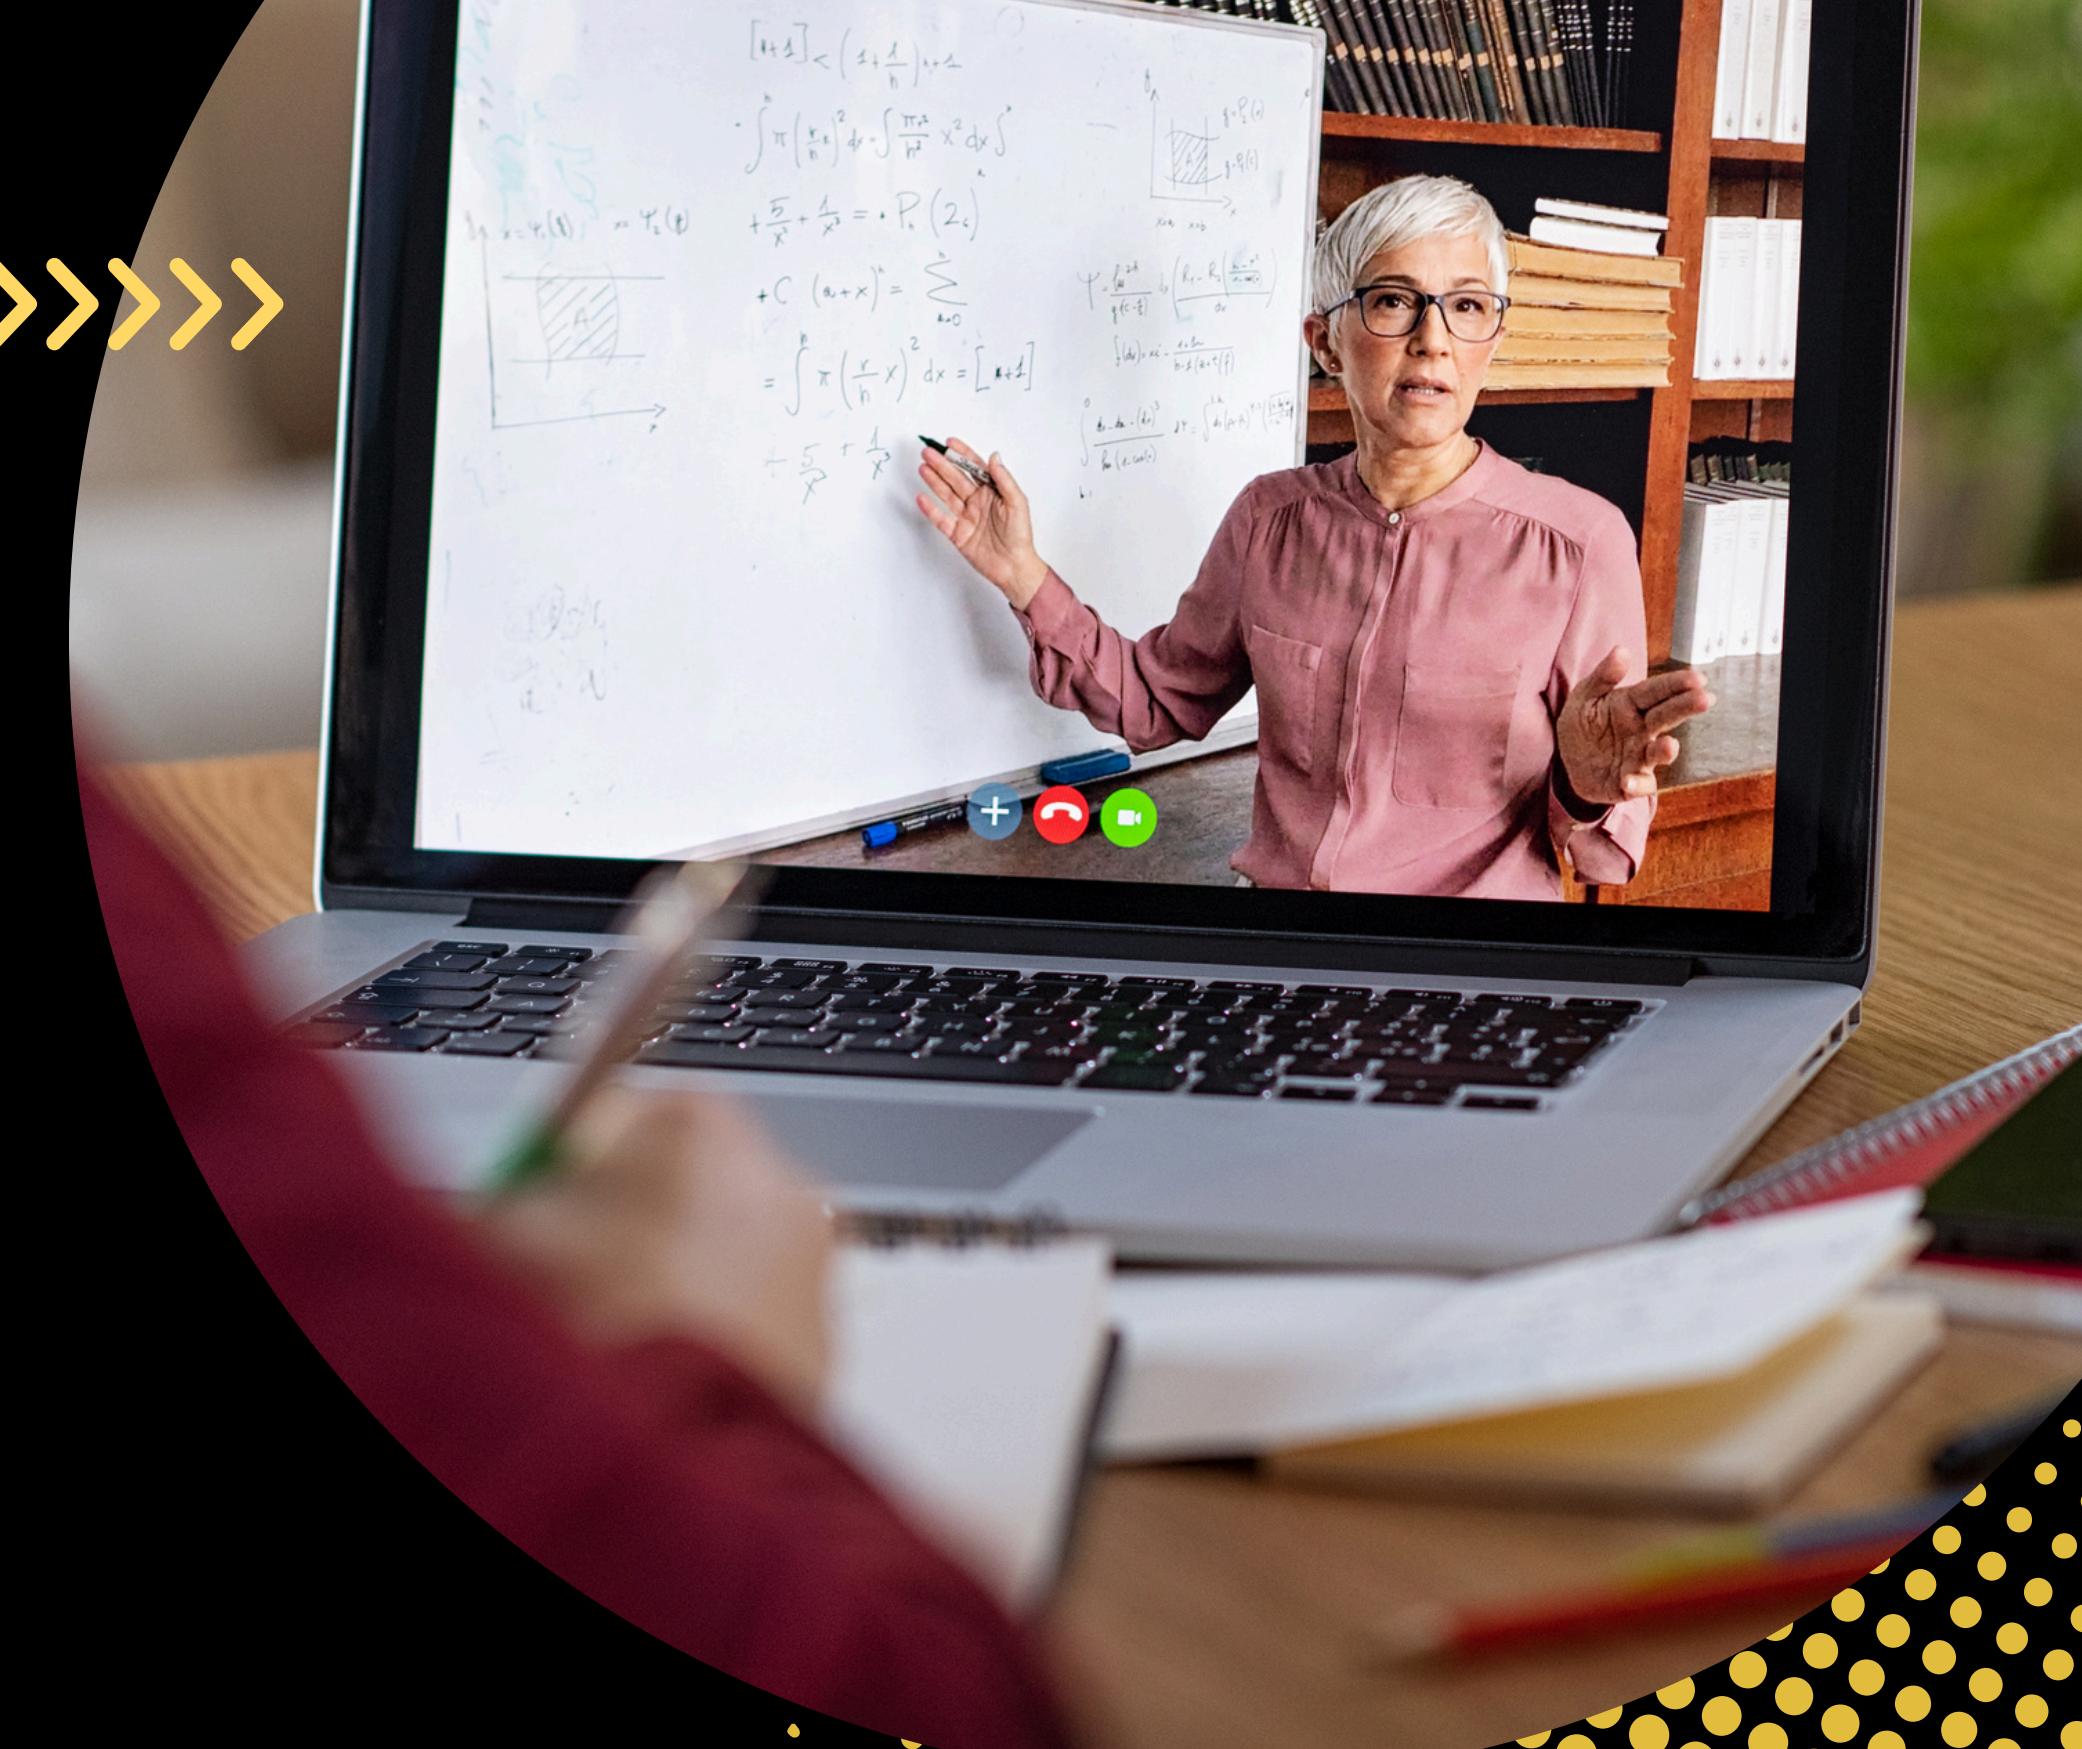

The focus is not on AI tools or vendor features; it's on ensuring your community is fit to be trusted, consumed, and amplified by AI.

>>>

# How does this program work?

- Live working sessions (Mon evening)
- Structured frameworks and templates
- Guided analysis of your own community
- Peer discussion and comparison
- Direct input from FeverBee Guest experts

# MONTH 1

## Evaluation And Risk Identification

This month establishes a clear, evidence-based view of how trustworthy, safe, and AI-ready your community knowledge really is before AI amplifies it at scale.

### Assess knowledge trustworthiness

Evaluate whether content can be safely treated as accurate, authoritative, and reusable across customer and AI-mediated journeys.

### Identify high-risk content areas

Surface duplication, contradiction, decay, and outdated guidance that could mislead customers or AI systems.

### Evaluate expertise visibility

Determine whether real expertise is discoverable or buried beneath activity, noise, and unverified answers.

### Map AI risk vs value zones

Identify where AI would genuinely amplify value today and where it would magnify errors or risk.

## MONTH 2

# Fix the Structure

This month prevents further damage and rebuilds the structural foundations required for community knowledge to scale safely and reliably.

### Establish authority and verification

Define what counts as authoritative content, who can validate it, and how correctness is confirmed for high-impact topics.

### Standardise structure and taxonomy

Clean up categories, tags, and navigation in critical areas to reduce ambiguity and misclassification.

### Separate content intent

Clearly distinguish conversation, answers, and canonical resources so both humans and AI know what to trust.

### Enforce “no new mess” rules

Introduce lightweight rules that ensure new content strengthens the system instead of degrading it.

# MONTH 3

## Signal Quality, Freshness & AI Enablement

This month prepares your community to be safely consumed, interpreted, and amplified by AI-driven systems.

### Reduce ambiguity and conflict

Consolidate conflicting answers, define shared language, and align community content with docs, support, and CS.

### Define AI guardrails

Decide where AI should and should not be used, with clear boundaries for safety, trust, and accuracy.

### Apply freshness signals

Label content as current, outdated, or deprecated and introduce versioning and review cadences.

### Establish the AI operating mode

Set governance, escalation paths, and measurement so AI use is intentional and accountable.

## What's Included?

- 3 months of guided cohort sessions
- 12 personal guidance sessions
- Access to FeverBee's AI readiness frameworks and tools
- Peer learning with a small group of comparable organisations
- Direct feedback and facilitation from FeverBee
- Applied work focused on your community

***Enrollment now open***  
**Begins: Feb 16 | \$4000 Per Organisation**
